Mix Archive Manager (MP_Mix_Manager_v0.3)

Platform [Linux](#) | [macOS](#) | [Windows](#) | [FreeBSD](#) [macOS](#) | [Sonoma](#) | [Sequoia](#) | [Apple Silicon & Intel](#) [Windows](#) | [10](#) | [11](#) | [Git Bash](#) | [WSL2](#)

[FreeBSD](#) | [14.x](#) | [15-CURRENT](#) | [Ports & Pkg](#) [Language](#) | [Bash](#) | [Python](#) | [PowerShell](#) [Audio](#) | [32bit Lossless FLAC](#) [Alarm Clock](#) | [Steam & FLAC Mix \(Linux\)](#)

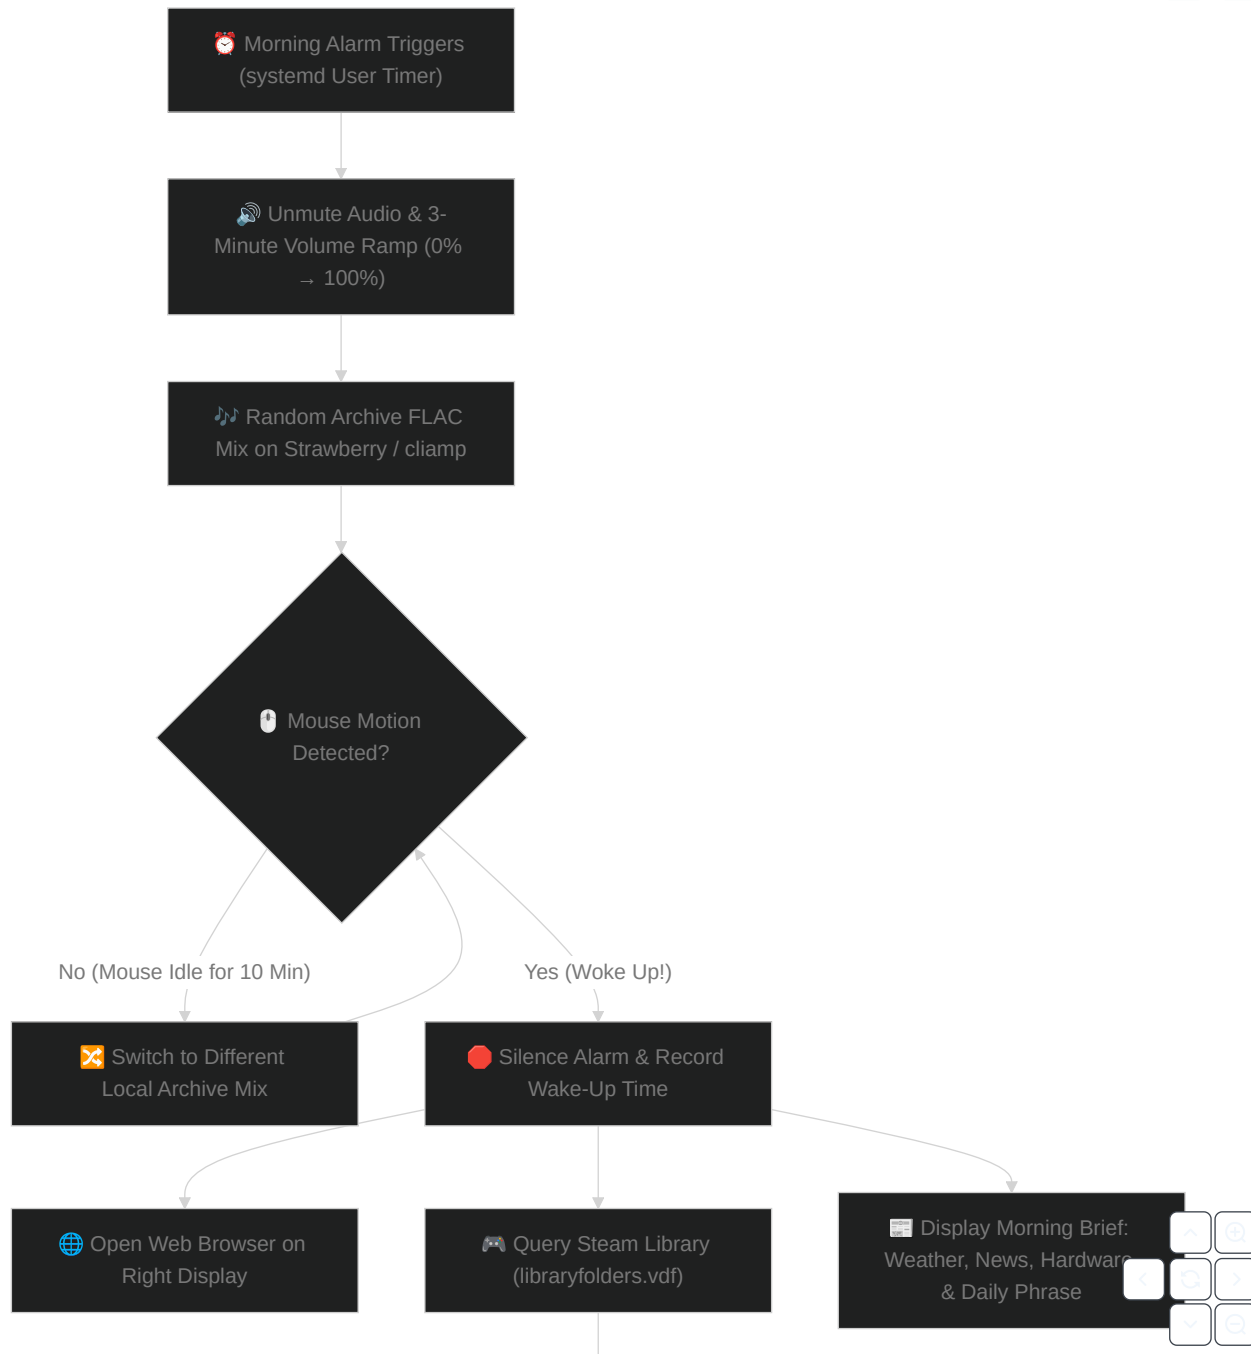

[Congen](#) | [KDE Connect Remote Control](#) [License](#) | [MIT](#)

An enterprise-grade workstation orchestration console and media management suite designed for high-resolution audio production, multi-hour DJ mix archiving, automated FLAC mastering, Traktor Pro playlist extraction, live tracklist tracking, YouTube video synthesis, system maintenance, and AI workflow control across **Linux (Bazzite / SteamOS / Fedora / Ubuntu)**, **macOS (Latest Sequoia / Sonoma / Apple Silicon M1-M4 & Intel)**, **Microsoft Windows 10 & 11**, and **FreeBSD (14.x / 15-CURRENT)**.

Brand New Feature: MPlanetarians Alarm Clock (Wake Up Edition) — Wake Up with a Random Mix & a Random Steam Video Game (Linux Only Support at the Moment)

 Important

Tired of boring buzzer alarms? Mix Archive Manager now includes **MPlanetarians Alarm Clock (Wake Up Edition)** — an invigorating morning wake-up system that blasts a random mix from your local FLAC archive through Strawberry or cliamp, unmuting and ramping volume up over 3 minutes. It tracks your mouse to detect when you're truly awake, opens your default web browser on your secondary right-hand monitor, and queries your Steam library to offer **3 random video games to play for breakfast!** *(Linux Only Support at the Moment).*

☀ Why This Morning Wake-Up Experience Is Game-Changing:

- 🎵 **High-Energy Lossless Wake-Up:** Randomly selects between **Strawberry** and **ciamp**, pulls a random high-resolution mix from your local archive disks (safely skipping cloud mounts), starts softly, and steadily ramps up the volume over 3 minutes until full alarm volume.
- 🖱 **Active Movement Wake Detection:** Move the mouse to silence the alarm. If your mouse stays still for 10 minutes, the clock knows you fell back asleep and starts playing a completely different archive mix!
- 🎮 **Steam Video Game for Breakfast:** Automatically parses your Steam library (`libraryfolders.vdf`), filters out developer tools and runtimes, and presents 3 random games from your collection, asking: *"Would you like to play a game for breakfast?"* Launch at chosen title directly into Steam with a single keypress!
- 🖥 **Smart Dual-Screen Browser Placement:** Automatically calculates your monitor coordinates and opens your morning browser window on the display directly to the right of your primary screen.
- ☀ **Morning Screen & Daily Brief:** Features an animated clock, daily weather forecast, rain alerts, exercise routine, healthy breakfast ideas, system hardware vitals, manual page of the day, and internet word/phrase of the day.
- 🎨 **4 Elegant Color Themes:** Midnight Ink (navy and silver), Warm Brass (amber lamp-light), Forest Hour (deep green and gold), and Porcelain (warm grey and rose).
- 📊 **Main Page Live Status Banner:** The Mix Archive Manager main dashboard directly displays your alarm arm state, next alarm countdown, active sound target, Steam library readiness, and morning wake-up action at a glance.

- 🐧 **Linux-Native System Integration:** Powered by systemd user timers, PipeWire `wpctl` , `xdotool` , and Steam Linux desktop protocols.

📍 How It Works in 3 Quick Steps:

1. Launch from Main Menu or CLI:

```
./Mix_Archive_Manager.sh --alarm
# or press Option 18 on the Main Menu, or run directly:
mix-archive-manager alarm
```

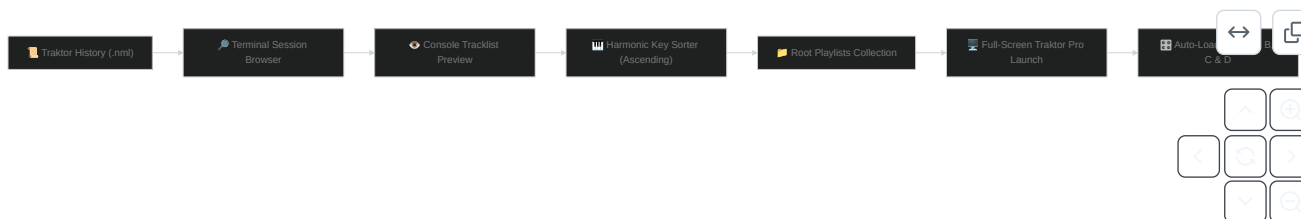

2. **Set Your Morning Alarm:** Use Option 3 to schedule your wake-up time (e.g. `07:30` , `6:45am`), choose repeat frequency (daily or once), volume, and audio player preference.
3. **Wake Up, Game & Start Your Day:** When the alarm rings, move your mouse to silence it. Your web browser immediately opens on your right display, and 3 random Steam games are offered to launch directly for breakfast!

⚡ Spotlight Feature: Traktor History to Harmonically Sorted Playlist & Stage Setup (macOS Native)

📌 Important

Djing on macOS with Native Instruments Traktor Pro? You can now convert past live gig recordings and rehearsal history logs into clean, harmonically organized playlists and launch straight into your next mix with a single keypress.

Whether you've just wrapped a 4-hour live session or want to revisit and rebuild your best transitions from last month, **Mix Archive Manager** eliminates tedious set reconstruction:

🎧 Why Every Traktor DJ on Mac/Windows Needs This:

- 🔍 **Auto-Detection Across Traktor Versions:** Automatically detects your installed Traktor Pro release (Traktor 3, Traktor Pro 3.11+ Traktor Pro 4) and instantly discovers your session History `.nm1` archives without needing any manual path configuration.
- 📂 **Interactive Session History Browser:** Lists all your past performance sessions with session dates, start timestamps, and total tracks played.
- 👁️ **Console Tracklist Preview:** Inspect the full played setlist (Artist, Title, Duration, Key, BPM) in your terminal *before* committing to generate.
- 🎵 **Harmonic Key Ascending Order:** Tracks are automatically sorted in ascending musical / Camelot key order (1A-12B), ensuring harmonic mixing compatibility right from the first transition!
- 📁 **Native Traktor Playlist Injection:** Generates a standard Traktor playlist `.nm1` directly inside Traktor's default Root Playlists directory (`$ROOT`), appearing immediately in Traktor's browser tree.
- 🚀 **Instant Full-Screen Stage Dispatch:**
 - Automatically brings Traktor Pro to the front in **Full Screen** mode.

💡 Tip

Ready to level up your workflow? Clone or download the repository, launch `./manager_macos.command` (or select Option 33 on macOS) -

33. Generate Playlist from History Files on Traktor 3 (v3.11.1 Key Sorted / Decks Ready) , and experience effortless set reconstruction and instant stage prep. Star the repo to follow new updates!

📍 How It Works in 3 Quick Steps:

1. Launch the Manager on macOS:

```
./manager_macos.command
# or press Option 33 on the Main Menu, or Option 21 -> 12 in the DAWs Menu
```

2. **Select & Preview Your Session:** Choose any past DJ session from the interactive list. Instantly review the entire setlist in the terminal, including musical keys and tempo.
3. **Hit Enter & Start Mixing!:** The manager backs up `collection.nml`, inserts your harmonic playlist into Traktor's root library, opens Traktor in true full-screen mode, and loads Decks A, B, C, and D with the first four tracks. You are instantly ready to mix!

Overview

The **Stream of Frequency Mix Archive Manager** provides an interactive, terminal-driven control center (**78 operations** across **7 logical relational sections**) that automates the entire lifecycle of professional DJ mixes and audio recordings:

1. **Ingestion & Concatenation:** Auto-detects split multi-hour WAV recordings (e.g. 3-hour chunks from Traktor / external recorders), normalizes filenames, and concatenates them into single pristine tracks.
2. **Lossless FLAC Mastering & Acoustic Spectrograms:** Encodes to 32-bit sample depth FLAC (`-sample_fmt s32 -compression_level 12`), optimizes and embeds cover art (`scale='min(1400,iw)':-1`), and outputs high-resolution 1080p acoustic spectrograms across an expanded acoustic suite (Spek, Sonic Visualiser, SoX 24-bit multi-colormap spectrograms, Praat, Kwave, Audacity).
3. **Traktor Pro History Integration, Harmonic Playlists & Studio Setup:** Scans Traktor history XML archives (`collection.nml`), maps played tracks to exact session timestamps, generates ready-to-publish timestamped tracklists with HTML/PDF document exports and features **macOS Native Automated Traktor Playlist Generation** that sorts history by musical key, injects playlists into Traktor root, and opens Traktor in full-screen with Decks A-D pre-loaded ready to mix.
4. **Mix Publishing Schedule & Multi-Platform Syndication:** Integrated multi-platform release calendar and syndication scheduler (`publish_calendar_scheduler.sh`) supporting Apple Podcasts, Spotify for Podcasters, YouTube, SoundCloud, Mixcloud, DI.FM, Proton Radio, Bandcamp, custom RSS feed generation (`podcast_feed.xml`), and standard iCalendar (`.ics`) exports.
5. **Promotional & Publisher Outreach Email Suite:** Dedicated outreach and pitch system for podcast publishers, syndicators, club promoters, festival bookers, radio stations, and record labels (`send_promo_email.py`). Sends rich HTML and plaintext emails with automatic episode cover art attachments, cue tracklists, and streaming links via SMTP or native desktop email clients (`mailto:` in Apple Mail, Thunderbird, Outlook).
6. **Digital Audio Workstations (DAWs) & Studio Diagnostics:** Unified launch hub and package installer for REAPER, Logic Pro (macOS), FL Studio (macOS, Windows, Linux via Wine/Bottles), Traktor Pro (macOS & Windows), GarageBand (macOS), Ardour, LMMS, Bitwig Studio, Bespoke Synth, Audacity, and MusicBrainz Picard. Includes deep **Studio Hardware & Software Inspector** (`inspect_audio_studio.sh`) mapping PipeWire, ALSA audio sinks/sources, MIDI hardware controllers (AKAI MPKmini2, Arturia MiniLab mkII, Valve), and installed studio DAWs.
7. **Audio Specification Inspector & Stream Metadata:** Comprehensive technical stream analysis (`inspect_playing_audio.sh` & `bin/view-mix-specs`) inspecting currently playing audio or archive mixes: Container/Format (`WAV` , `FLAC`), Bit Depth (`24-Bit` , `16-Bit` , `32-Bit`), Sampling Rate (`48,000 Hz` / `48.0 kHz`), File Path, File Name, Duration, Size, Title, Artist, Codec, Bitrate, Compression Ratio, Drive Free Space, and Companion Assets (Covers, Tracklist, Spectrogram, Video).
8. **Active Audio Interface & Latency Display:** Real-time probe of default audio output device and hardware buffer latency (`scripts/get_audio_interface.py`) across PipeWire, ALSA, PulseAudio, macOS CoreAudio, Windows WASAPI, and FreeBSD OSS, displayed on boot and in live status.
9. **Master Audio Control & Retro Playback:** Instant live master audio mute/unmute toggle directly from the manager menu, custom `.m3u` / `.m3u8` / `.xspf` playlist suite (`manage_playlists.sh`), live MPRIIS and retro console audio player with real-time playback progress, track metadata, active filesystem paths, and instant cross-platform clipboard copy (`pbcopy` on macOS, `clip.exe` on Windows, `wl-copy` / `xclip` on Linux). Launches cliamp, Strawberry, VLC, foobar2000 (macOS & Windows), Winamp (Windows), Apple Music (macOS), Apple Podcasts (macOS), Haruna, and Kodi.
10. **Video Production & Procedural Netpbm Art:** Generates 4K UHD, 1080p Full HD, and 720p HD YouTube videos with NVENC/Hardware/VideoToolbox acceleration, 320kbps AAC, and smooth 5s audio fading (`generate_youtube_video.sh`), looping MP4-to-MP4 video production with segment fades and intro/outro thumbnail title cards (`Make_SOF_Episode_From_MP4_Audio_Output_MP4_1080p_Video.sh`), synchronized mix-video companion daemon (`sync_video_companion.sh`), procedural gradient binary Netpbm P6 `.ppm` cover art generator with mathematical palettes and typography overlays (`generate_ppm_cover.sh`), video clip cutter (`Cut_Video.sh`), and Electric Sheep screensaver. On Linux, **Record Video of DJ Mix using GPU Screen Recorder (Linux)** (main menu Section 2, option 21) opens GPU Screen Recorder in a new desktop window (`gpu-screen-recorder-gtk` or Flatpak `com.dec05eba.gpu_screen_recorder`) and returns to the menu.
11. **Dynamic System MOTD & Diagnostics:** Auto-updating Message Of The Day banner generator (`update_system_motd.sh`) highlighting the last 3 mixes, dates, times, sizes, formats, full file names, and audio specs. Automated rclone mirroring to Google Drive, SMB network share ingestion, multi-platform network services manager (SSH, Samba, FTP), real-time file transfer monitors and comprehensive archive statistics.
12. **Multi-Platform System Maintenance:** OS-tailored system cleaning (Bazzite `ujust`, macOS Homebrew caches & RAM purge, Windows `winget update` & TRIM, FreeBSD `pkg cleanup` & audit), display configuration, reboot control, and live manager & system uptime tracking.
13. **Themes & CLI Engine:** 9 custom retro terminal color themes (Cyberpunk, Dracula, Nord, Matrix, Solarized, Tokyo Night, Monokai, Gruvbox, Emerald) and an integrated interactive Bash CLI runner.

Quick Start

1. Linux (Bazzite / SteamOS / Fedora / Ubuntu)

For a fresh, step-by-step guide from a clean Bazzite installation, see [INSTALL_BAZZITE.md](#).

```
cd ~/MP_Mix_Manager_v0.3
chmod +x install.sh
./install.sh
```

Launch:

```
manager
# or:
~/manager.sh
```

Or launch **Mix Archive Manager** from your application menu or desktop shortcut.

2. Apple macOS (Sonoma, Sequoia, Apple Silicon & Intel)

Prerequisites

Install [Homebrew](#) (if not already installed):

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Install command-line tools:

```
brew install ffmpeg sox flac rclone jq btop
```

(Optional) Install audio/video GUI tools:

```
brew install --cask vlc audacity strawberry musicbrainz-picard gimp reaper foobar2000
```

Running on macOS

1. Run the installer to configure directory structure and desktop launcher:

```
cd ~/MP_Mix_Manager_v0.3
chmod +x install.sh
./install.sh
```

2. **Double-click** ~/Desktop/Mix Archive Manager.command in Finder, or execute:

```
./manager_macos.command
# or:
./Mix_Archive_Manager.sh
```

3. **One-Click Traktor Prep:** Press **33** on the main menu (or **21** → **12** under the DAWs menu) to convert any past session into an ascending musical key playlist, inject it into Traktor, and auto-load all 4 decks ready to mix!

3. Microsoft Windows 10 & 11

Prerequisites

Mix Archive Manager runs natively on Windows using **Git Bash** or **WSL2**:

- **Git for Windows (Recommended):** Download from <https://git-scm.com/download/win>.
- **Windows Terminal:** Built-in on Windows 11; available via Microsoft Store on Windows 10.

Install recommended utilities using `winget` in PowerShell / Windows Terminal:

```
winget install Gyan.FFmpeg Rclone.Rclone jqlang.jq
winget install VideoLAN.VLC Audacity.Audacity MusicBrainz.Picard GIMP.GIMP Cockos.REAPER foobar2000.foobar2000
```

Running on Windows

- **Double-click** manager.bat OR manager.ps1 from Windows File Explorer.
- Or run inside Git Bash:

```
./Mix_Archive_Manager.sh
```

4. FreeBSD (14.x / 15-CURRENT)

Prerequisites

Install dependencies using pkg :

```
pkg install -y bash python3 ffmpeg sox flac rclone jq btop git py311-mutagen py311-reportlab py311-pillow
```

(Optional) Install audio/video GUI tools:

```
pkg install -y audacity vlc strawberry-music-player gimp reaper
```

Running on FreeBSD

```
cd ~/MP_Mix_Manager_v0.3
chmod +x manager_freebsd.sh install.sh
./manager_freebsd.sh
# or:
./Mix_Archive_Manager.sh
```

 Feature Matrix (78 Core Operations in 7 Logical Sections)

[SECTION 1: MIX ARCHIVE WORKFLOW & INGESTION]

#	Operation	Description
1	Run FLAC Conversion Process	Batch concatenates split WAVs, encodes to 32-bit FLAC (Make_SOF_FLAC_CONVERSION.sh), embeds artwork, and outputs spectrograms.

#	Operation	Description
2	Convert Audio Formats, Bit Depths & Split FLACs	Converts audio between MP3 (320k, V0, 256k), Ogg Vorbis, Opus, Apple AAC, Apple ALAC lossless, FLAC, and WAV-to-WAV bit depths (32-bit float, 32-bit int, 24-bit PCM, 16-bit PCM). Includes sample-accurate lossless FLAC file splitting into equal parts (<code>Split_FLAC_File.sh / --split-flac</code>).
3	Retrieve Unconverted WAVs	Scans archive and quarantines/moves WAVs lacking a corresponding FLAC back to staging (<code>MOVE_NOT_CONVERTED_WAVS.sh</code>).
4	Search & Import Mixes (Local Drives & SMB)	Auto-discovers local storage volumes, USB drives, common music directories, and SMB shares. Scans and filters by mix size (≥ 100 MB) and audio extensions, checks for duplicates against the archive, and executes transfers with live progress and audit logs (<code>search_and_import_mixes.sh / import_new_mixes.sh</code>).
5	Rename Mix and Associated Assets	Atomically renames FLAC file, <code>.txt</code> tracklist, and Spek <code>.png</code> across all archive subdirectories.
6	Find & Remove Duplicate Audio Files	Fast chunk-content hashing & episode duplicate detector; supports safe reporting, quarantine to <code>DUPLICATES_QUARANTINE/</code> , or permanent deletion (<code>find_duplicate_mixes.py</code>).
7	Export / Copy Mixes to Specified Path	Copies complete mix packages (FLAC + Covers + Tracklists TXT/HTML/PDF + Spek) or filtered assets to USB drives or external paths.
8	Manage Audio Integrity Checksums	Generates and verifies SHA-256 integrity manifests (<code>checksums.sha256</code>) to ensure mixes are never corrupted or damaged (<code>manage_checksums.sh</code>).
9	Verify FLAC Files for Integrity	Multi-threaded decode pass across CPU cores; isolates corrupt FLAC bitstreams to quarantine (<code>Verify_FLAC_Files.sh</code>).
10	Cloud & Remote Backup Suite	Automated multi-cloud and storage backup engine supporting Google Drive, iCloud, Dropbox, and Specified Folders (<code>backup_mix_archive.sh</code>). Supports full archive or custom mix selections with companion assets.
11	Show Mix Storage Drive Space Remaining	Displays detailed filesystem capacity, mount point, free space progress bar, and hosted audio file counts for only the mix storage disk .
12	Refresh Archive Status & File Counts	Clears cache and performs a full recount of pending WAVs, converted WAVs, FLACs, and missing tracklists.
13	Configure Default Mix Archive Storage Folder	Configures user's primary mix storage path override (defaults to <code>/run/media/\$USER/WD_BLACK/B/MIX_ARCHIVE/</code> or root <code>MIX_ARCHIVE/</code>). Displays warning on boot if unconfigured.

— [SECTION 2: TRACKLIST, METADATA & PROMOTION] —

#	Operation	Description
14	Tracklist Management Suite	Complete metadata suite: browse all archive tracklists, keyword search, view active tracklist, and export to styled HTML and printable vector PDF (<code>generate_tracklist_docs.py</code>).
15	Search for Mix & Auto-Play with Live Tracklist View	Searches mix catalog, automatically queues and starts playback in <code>cliamp</code> (in a separate console window), then returns to manager and loads the live tracklist (skipped if playback doesn't start).
16	Scan & Generate Missing Tracklists	Extracts Traktor Pro history XML logs to generate matching timestamped <code>.txt</code> tracklists (<code>Check_Find_Tracklists.sh</code>).
17	Generate Master Tracklist HTML Index	Compiles all individual mix tracklists into a single, searchable HTML reference index (<code>Generate_Master_Tracklist.sh</code>).
18	Launch MusicBrainz Picard Meta Tag Editor	Opens Picard audio tagger (auto-installs on system if missing).
19	Promotional & Publisher Outreach Emails	Professional email pitch and enquiry suite (<code>send_promo_email.py</code>). Sends tailored HTML and Plaintext outreach to podcast publishers (Apple Podcasts, DI.FM, Proton), club/festival promoters, radio syndicators, record labels, and dance music media. Auto-attaches episode cover artwork, cue tracklists, and streaming links via direct SMTP or desktop email clients (<code>mailto:</code>). Includes address book and delivery logging.

#	Operation	Description
20	Mix Publishing Schedule & Multi-Platform Syndication	Release calendar and syndication scheduler (<code>publish_calendar_scheduler.sh</code>). Manages release dates, platforms (Apple Podcasts, Spotify, YouTube, SoundCloud, Mixcloud, DI.FM, Proton Radio, Bandcamp), custom RSS feed publishing (<code>podcast_feed.xml</code>), and standard iCalendar (<code>.ics</code>) export.
21	Go Shopping for New Music	Quick-launches curated music store browser tabs in parallel for Beatport , Apple Music , and Bandcamp (<code>shop_music.sh</code>).

— [SECTION 3: AUDIO PLAYBACK, DAWs & SOUND SUITE] —

#	Operation	Description
22	Digital Audio Workstations (DAWs) Menu	Unified launch hub and package installer for REAPER, Logic Pro (macOS), FL Studio (macOS, Windows, Linux), Traktor Pro (macOS & Windows), GarageBand (macOS), Ardour, LMMS, Bitwig Studio, and Bespoke Synth. On macOS, includes Option 12: Generate Playlist from Traktor History Files & 4-Deck Setup .
23	Open Mix WAV/FLAC Audio File in DAW	Direct dispatch: prompts user to search by episode/keyword or select from archive mixes, then automatically opens the mix audio file in REAPER, Logic Pro, GarageBand, FL Studio, Audacity, Ardour, or Bitwig.
24	Generate Spectrograms using Spek & Analysis Suite	In-place acoustic spectrogram generator (<code>generate_spek.sh</code>): single-file interactive generation with instant preview viewer prompt, and batch directory processing for WAV, MP3, and FLAC files. Includes Sonic Visualiser, SoX 24-bit multi-colormap spectrograms, Praat, and Audacity analysis.
25	Launch Audacity Audio Editor	Launches Audacity audio editor or installs via Homebrew / winget / Flatpak / native packages.
26	Launch Audio Players Menu	Quick launch hub for cliamp, Strawberry, VLC, foobar2000 (macOS & Windows), Winamp (Windows), Apple Music (macOS), Haruna, and Kodi.
27	Configure Default Audio Player & Startup Autoplay	User preferences suite: choose default audio player (cliamp, Strawberry, VLC, foobar2000, Winamp, Apple Music, Haruna, Kodi, Audacity, custom), default video player (VLC, mpv, Haruna, Kodi), toggle startup mix autoplay, toggle startup YouTube autoplay (only when mix audio plays), configure live weather banner location, toggle auto-opening cover art, toggle auto-displaying tracklists in borderless console, and configure tracklist viewer preference (<code>TRACKLIST_VIEWER</code>).
28	cliamp Music Player & Track Control	Built-in retro terminal player: now-playing path display, cross-platform clipboard copy, folder open, and playback controls.
29	View Playing Mix Audio Specifications & Stream Metadata	Inspects currently playing mix (or selected archive mix) and displays deep technical audio stream specifications: Container/Format (<code>WAV</code> , <code>FLAC</code>), Bit Depth (<code>24-Bit</code> , <code>16-Bit</code> , <code>32-Bit</code>), Sampling Rate (<code>48,000 Hz</code> / <code>48.0 kHz</code>), File Path, File Name, Duration, Size, Title, Artist, Codec, Bitrate, Compression Ratio, and Companion Assets (<code>inspect_playing_audio.sh</code>).
30	Custom Mix Playlists & Archive Folder Playlists Suite (.m3u8 / .xspf)	Comprehensive archive playlist manager (<code>manage_playlists.sh</code> & <code>generate_archive_folder_playlists.py</code>): build custom playlists, generate Mix Archive Folder Playlists from all configured storage folders with automatic synchronization to <code>PLAYLISTS_GENERATED</code> (in application root and all archive storage folders), reorder, export <code>.m3u8</code> / <code>.xspf</code> , and dispatch to <code>cliamp</code> , <code>strawberry</code> , <code>vlc</code> , <code>mpv</code> , or <code>kodi</code> .
31	Launch Strawberry Music Player	Opens Strawberry Music Player in a separate desktop window.
32	Launch VLC Media Player	Launches VLC audio/video media player.
33	Generate Playlist from Traktor History (macOS Native) / Haruna (Linux)	macOS Native Spotlight Feature: Scans Traktor Pro 3/4 history files, displays session tracklists in console, sorts tracks in Key Field Ascending order (1A–12B), injects playlist into Traktor root collection (<code>\$ROOT</code>), and launches Traktor in full screen with Decks A, B, C, & D pre-loaded ready to mix! On Linux: launches Haruna (<code>org.kde.haruna</code>).
34	Launch Kodi Entertainment Center	Launches Kodi Media Center.
35	Show Connected USB MIDI Devices	Inspects connected synthesizers, DJ controllers, and keyboards (<code>list-midi-devices</code>).

#	Operation	Description
36	Studio Hardware & Software Inspector	Deep audio diagnostic inspector (<code>inspect_audio_studio.sh</code>): surveys active PipeWire / PulseAudio / ALSA soundcards, sinks, sample rates, latencies, connected MIDI controllers & control surfaces (AKAI MPKmini2, Arturia MiniLab mkII, Valve), and installed studio DAWs.
37	Toggle Audio Mute / Unmute & Master Volume Control	Instant live audio mute toggle via PipeWire (<code>wpctl</code>), PulseAudio (<code>pactl</code>), ALSA, or macOS AppleScript without leaving the manager.
38	Morning Alarm Clock & DJ Mix Playback Scheduler	Alarm Clock & Playback Suite (<code>alarm.sh</code> & <code>scripts/schedule_mix_playback.py</code>): Wake up to random lossless archive mixes with 3-minute volume ramp, mouse motion wake detection, dual-screen browser opening, and 3 random Steam video games offered for breakfast; also schedules future DJ mix playback events.

— [SECTION 4: VIDEO PRODUCTION, ART & VISUAL MEDIA] —

#	Operation	Description
39	Generate YouTube Video (4K UHD, 1080p, 720p)	Encodes pristine YouTube MP4 videos in 4K UHD (3840x2160), 1080p Full HD (1920x1080), or 720p HD (1280x720) with NVENC/Hardware acceleration, 320kbps AAC audio, and smooth 5s audio fading (<code>generate_youtube_video.sh</code>).
40	Cut or Split Video File (.mp4 / .mkv)	Precision video editing and splitting suite: cut video clips by start/end timestamps (<code>cut_video.sh</code>) or split YouTube .mp4 video files into equal parts with lossless stream copy or frame-accurate re-encode (<code>split_video_file.sh</code> / <code>--split-video</code>).
41	Launch Video Playlists	Plays Defasten or NFT video playlists in VLC, or regenerates .m3u / .xspf files.
42	Launch Specific Video in Default Video Player	Launches specific video files or streaming URLs in user's default video player (VLC default, mpv, Haruna, Kodi) (<code>launch_specific_video.sh</code>).
43	Launch GIMP Image Editor	Launches GIMP image editor or installs via package manager.
44	Convert Cover Art & Resize / Byte Target	Converts covers between JPEG, WebP, PNG, and TIFF with preset resolutions (3000x3000, 1400x1400, 1080x1080) and binary-search byte targeting (e.g. strict <= 1MB podcast standard).
45	View Cover Art by Mix Number	Searches <code>COVERS/</code> directory by episode or mix number and opens in system image viewer.
46	Procedural Gradient .PPM Cover Art Generator	Pure mathematical Netpbm P6 binary .PPM cover art generator (<code>generate_ppm_cover.sh</code>): renders linear, radial, plasma, and angular gradients, composites typography overlays (Artist, Title, Episode, Tags), and exports high-res lossless PNGs.
47	Launch Electric Sheep Screensaver	Launches Electric Sheep generative screensaver.
48	Synchronized Mix-Video Companion Player Daemon	Intelligent background watcher (<code>sync_video_companion.sh</code>): automatically discovers matching companion video for the currently playing mix and launches it in VLC / Haruna / MPV, closing the player when audio stops.
49	Record Video of DJ Mix using GPU Screen Recorder (Linux)	Main menu Section 2, option 21. Opens GPU Screen Recorder in a new desktop window on Linux (<code>gpu-screen-recorder-gtk</code> , or Flatpak <code>com.dec05eba.gpu_screen_recorder</code>) and returns to the menu. Direct shortcut: <code>gpu-screen-recorder</code> .

— [SECTION 5: LIVE MONITORS & SYSTEM DIAGNOSTICS] —

#	Operation	Description
50	Launch Live Tracklist Monitor	Real-time CLI display connecting to Strawberry MPRIS and <code>cliamp</code> with live progress and track info (<code>SOF_Live_Tracker.sh</code>).
51	Launch Traktor Live Monitor & Audio Recorder	Cross-platform live terminal dashboard (<code>scripts/traktor_monitor.py</code> / <code>traktor_monitor.sh</code>): monitors Traktor CPU %, RSS RAM, deck playback/loaded tracks, active WAV recording locks, real-time file size growth, and audio interface hardware. Features direct recording controls (start, stop, toggle) via AppleScript and Windows Automation.
52	Launch Live File Transfer Monitor	Inspects transfer speeds, byte positions, and percentage for huge files (<code>transfer-monitor</code>).

#	Operation	Description
53	Launch Chrome Upload Monitor	Monitors web uploads (e.g. Apple Podcasts Connect, YouTube Studio) in real-time (<code>chrome_upload_monitor.py</code>).
54	View Advanced Archive Statistics	Deep inventory scan calculating total duration, file sizes, GB footprint, and tracklist completeness (<code>sof_archive_stats.sh</code>).
55	View Running Background Tasks	Scans process table for active encoding, syncing, or AI batch jobs.
56	Launch Resource Monitor	Launches <code>bttop</code> for deep multi-core CPU and memory profiling.
57	Launch GPU Process Monitor	Launches <code>nvttop</code> for real-time monitoring of NVIDIA GPU clock, VRAM, and power draw.
58	Launch System Process Monitor	Quick-launches <code>top</code> inside manager session.

— [SECTION 6: SYSTEM, NETWORK & HARDWARE MANAGEMENT] —

#	Operation	Description
59	Manage WAN2GP Server	Controls WAN2GP AI video server (Profile 2 / 4.5, Flux Klein 9B batch, LTX Video 2B/13B). Accessible via KDE Connect shortcuts, desktop entries, and CLI (<code>--wan2gp-start-4.5</code> / <code>--wan2gp-stop</code> / 58 2 / 58 3).

 [README](#)  [MIT license](#)

60	Manage DeepSeek Monitoring Suite	Controls DeepSeek Harness web server (<code>pnpm dsh web</code> with <code>--trusted-host 192.168.1.11:3080</code> / <code>--trusted-host 192.168.1.11 --no-open</code> on port 3080). Supports launching in a dedicated terminal window or background daemon, one-click browser opening (<code>http://192.168.1.11:3080</code>), server stop/restart, process inspection, and live server logs (<code>/tmp/dsh-mobile.log</code>). Accessible via CLI (<code>--dsh-mobile</code> , <code>--dsh</code> , <code>--dsh-start</code> , <code>--dsh-bg</code> , <code>--dsh-web</code> , <code>--dsh-stop</code> , <code>--dsh-status</code> , 60 1 , 60 2 , 60 3 , 60 4 , 60 5 , 60 6).
61	Manage Ollama Server	Controls Ollama LLM server (<code>ollama serve</code> inside distrobox container <code>ollama-container</code> on port 11434). Supports background daemon mode, interactive terminal window mode (live logs), server stop/restart, hardware acceleration status (NVIDIA RTX CUDA), local models listing (<code>qwen2.5</code> , <code>llama3.1</code> , <code>nemotron</code> , etc.), and interactive CLI chat. Accessible via CLI (<code>--ollama-serve</code> , <code>--ollama-start</code> , <code>--ollama-stop</code> , <code>--ollama-status</code> , 60 1 , 60 2 , 60 3 , 60 4 , 60 5 , 60 6).
62	Manage DeepSeek Harness Server (<code>dsh-mobile</code>)	Controls DeepSeek Harness web server (<code>pnpm dsh web</code> with <code>--trusted-host 192.168.1.11:3080</code> / <code>--trusted-host 192.168.1.11 --no-open</code> on port 3080). Supports launching in a dedicated terminal window or background daemon, one-click browser opening (<code>http://192.168.1.11:3080</code>), server stop/restart, process inspection, and live server logs (<code>/tmp/dsh-mobile.log</code>). Accessible via CLI (<code>--dsh-mobile</code> , <code>--dsh</code> , <code>--dsh-start</code> , <code>--dsh-bg</code> , <code>--dsh-web</code> , <code>--dsh-stop</code> , <code>--dsh-status</code> , 61 1 , 61 2 , 61 3 , 61 4 , 61 5 , 61 6).
63	Manage Network Services & Congen KDE Connect	Bulk and individual start, stop, restart, and status for SSH (<code>sshd</code>), Samba (<code>smb</code>), and FTP (<code>vsftpd</code>), plus full Congen KDE Connect remote control suite (<code>Congen/Congen</code>) for wireless remote smartphone control of workstation apps, audio playback, and mix archive tasks.
64	Block Internet Access (LAN Only)	Activates an isolated firewall table blocking WAN while keeping LAN open (<code>block-internet</code>).
65	Restore / Unblock Internet Access	Restores immediate full internet connectivity (<code>unblock-internet</code>).
66	Display Settings (OS Tailored)	Opens Plasma Wayland on Linux, macOS Display Settings, or Windows Display Settings (<code>ms-settings:display</code>).
67	Audio / Sound Settings (OS Tailored)	Opens Plasma X11 on Linux, Audio MIDI Setup on macOS, or Windows Sound Panel (<code>control.exe</code> / <code>mmsys.cpl</code>).
68	Close All Desktop Applications	Gracefully closes external desktop windows using AppleScript (macOS), PowerShell (Windows), or <code>wmctrl</code> (Linux) while shielding the manager.
69	System Maintenance & Cleanup	Executes platform maintenance (Linux <code>ujust clean-system</code> , macOS <code>brew cleanup</code> & RAM purge, Windows <code>winget upgrade</code> & temp cleanup, FreeBSD <code>pkg clean</code> , <code>pkg upgrade</code> , <code>pkg autoremove</code>).

#	Operation	Description
70	Launch GeeXLab Demo Launcher	Runs 3D/OpenGL shader demos and GPU stress tests via GeeXLab/FurMark.
71	Burn ISO Image to USB Drive	Writes bootable ISO files directly to removable USB storage with safety checks and dd progress (macOS diskutil / Linux lsblk).
72	Dynamic System MOTD Banner Manager	Dynamic Message Of The Day generator (update_system_motd.sh): renders stylized ANSI MOTD table summarizing the last 3 created mixes, dates, times, sizes, formats, and full file names.

[SECTION 7: AI, SHELL CLI & SETTINGS]

#	Operation	Description
73	Launch AI Assistant / Models (AGY)	Starts Antigravity CLI AI sessions (Claude Sonnet, Claude Opus, GPT-OSS, Gemini), manages local Ollama models, or launches DeepSeek Harness (dsh-mobile).
74	Run Bash CLI Commands	Built-in interactive Bash shell and direct command execution runner.
75	Manager Themes & Color Palette Switcher	Switch between 9 terminal themes (Cyberpunk, Dracula, Nord, Matrix, Solarized, Tokyo Night, Monokai, Gruvbox, Emerald, Classic).
76	Manage Installation & Configuration	Comprehensive installation migration wizard (relocates codebase path and auto-repoints all CLI wrappers and desktop entries), instant timestamped config backups, portable .tar.gz config bundle export, safe bundle import, rollback/restore of historical snapshots, and automated system update (mix-archive-manager update / update_manager.sh).
77	Reboot System	Cross-platform system reboot with safety confirmation dialog (systemctl reboot , macOS osascript , Windows shutdown.exe /r , FreeBSD shutdown -r now).
78	Exit Manager	Cleans up and exits the console session.

⚙️ Configuration (config.env)

Mix Archive Manager automatically loads config.env from the codebase directory or ~/.config/mix-manager/config.env .

```
# Target storage path for music and mix archives
# Auto-detected across platforms:
#   Linux:   /run/media/$USER/WD_BLACK_B/MIX_ARCHIVE
#   macOS:  /Volumes/WD_BLACK_B/MIX_ARCHIVE
```
